Breeds of beef cattle

A. *Bos Indicus*

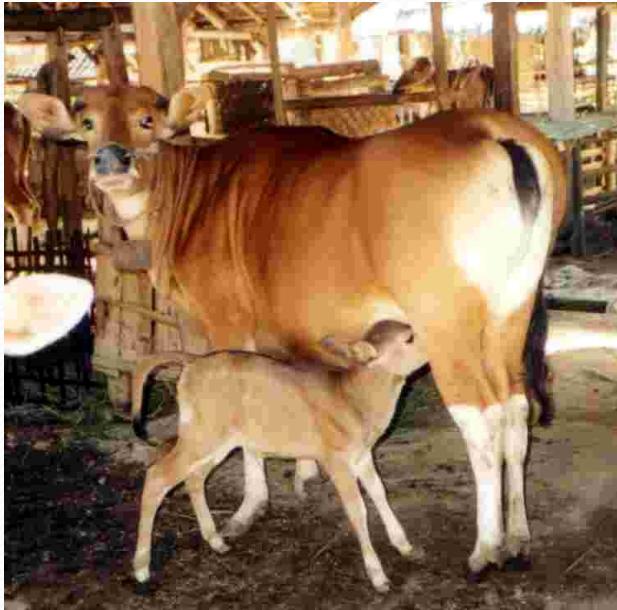

- Hump
 - Loose skin
 - Resist in heat weather
 - Good disease resistance
 - Lower growth rate
 - Lower reproduction traits
(fertility)
- 
- Good productivity in poor condition

Breeds of beef cattle

B. Bos Taurus

- Humpless
- Not resist in heat weather
- Less disease resistance
- Better growth rate
- Better reproduction traits

Indonesian indigenous beef cattle breeds

Sapi Bali

- Domestikasi dari banteng (*bibos banteng*)
- Pedet dan betina berwarna merah, jantan berwarna coklat tua/hitam
- Lutut ke bawah putih, pantat putih
- Mempunyai garis belut pd punggung
- Bentuk badan kecil, memanjang dg leher ramping
- Tidak berpunuk (humpless)

Sapi Madura

- Diduga persilangan antara *Bos Taurus* dengan *Bos Indicus* (kromosom Y mirip *Bos Indicus*)
- Jantan dan betina bewarna merah bata bercampur putih pada bagian pantat dan kaki, namun tidak ada batas jelas
- Jantan berpunuk, betina tidak
- Tanduk kecil dan pendek
- Tubuh kecil, kaki pendek

Sapi Galekan

- Hampir punah, diduga sapi Jawa
- Warna badan didominasi warna merah bata
- Pantat dan kaki smear putih
- Punggung lurus dengan garis punggung hitam
- Bertanduk, telinga dan mata bergaris hitam

Sapi Rambon

- Diduga persilangan antara sapi Bali, Sapi Madura dan sapi PO (peranakan Ongole)
- Terdapat di daerah Banyuwangi dan Bondowoso

Other *Bos Indicus* breed

Sapi Ongole

- Asal: Madras, India → dibawa ke Indonesia oleh Belanda
- Bewarna keputih-putihan/abu-abu
- Bergelambir dan berpunuk
- Tanduk pendek dan kuat
- Kepala, leher, gumba, lutut berwarna gelap terutama jantungnya

provided by Dr.A.Madhusudhna Rao

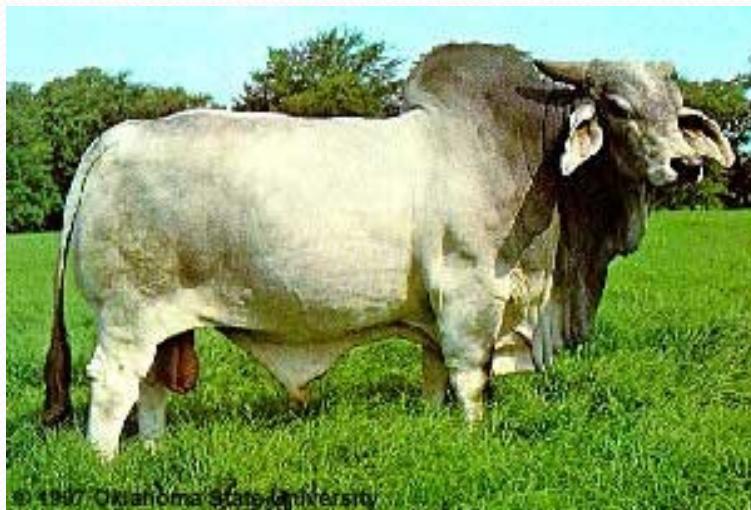

Sapi Peranakan Ongole

- Persilangan sapi Jawa dan Ongole
- Warna putih/kelabu/kehitaman
- Kaki panjang
- Betina lebih pendek dibandingkan jantan
- Kepala relatif pendek, profil melengkung
- Punuk besar, bergelambir

Sapi Brahman

- Dari India
- Warna kelabu/merah cederung hitam
- Berpunuk, bergelambir dan telinga menggantung
- Tahan panas dan parasit

Bos taurus

Limousin cattle

- Origin : France
- Red/ black with lighter eyes and belly
- Medium to large frame size
- Noted for their carcass leanness and large loin area

© 1997 Oklahoma State University

Simmental cattle

- Origin : Switzerland
- Dual purpose cattle (high milk and carcass yield)
- White face, brisket, belly, legs and tail
- Shades of red/yellow on the body
- Rapid growth
- Horned

provided by Beate Milerski

Angus Cattle

- Origin : Scotland
- Black in colour, polled (born with no horns)
- Smooth hair coat
- Medium frame size
- Heavy muscled with (well marbled beef)

Hereford cattle

- Origin : Herefordshire, England
- Medium frame size
- Light yellow to red cherry with white belly and face
- Thick and curly hair coat
- Medium muscled

Shorthorn Cattle

- Origin : Northern England
- Dual purpose cattle
- Red, white or roan (red and white)
- Medium muscled

provided by the American Shorthorn Association

Santa Gertrudis cattle

- Cross between Brahman (3/8) and Shorthorn (5/8)
- Loose skin, floppy ears and small humped (for the bull)
- Polled or horned
- Can adapt well with poor condition

Beefmaster Cattle

- Cross between Hereford, Shorthorn and Brahman
- Red
- Rapid growth, good carcass quality
- Good fertility and conformation

Wagyu cattle

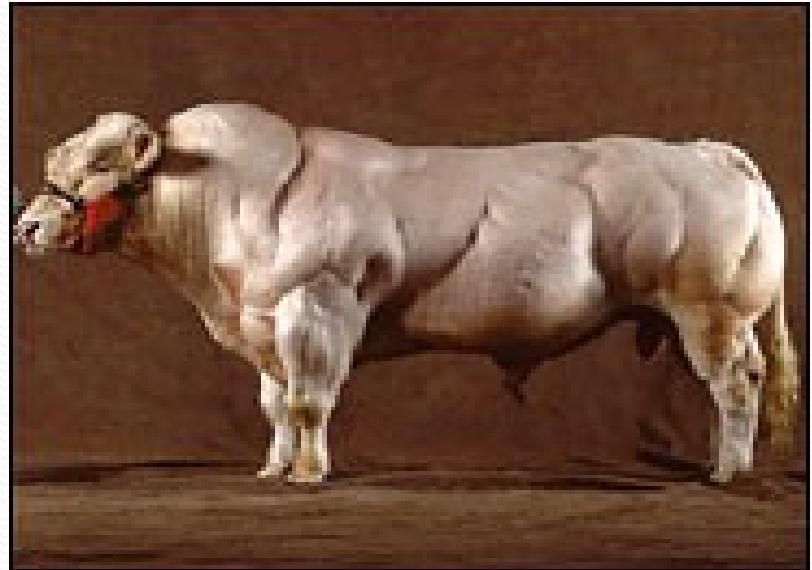

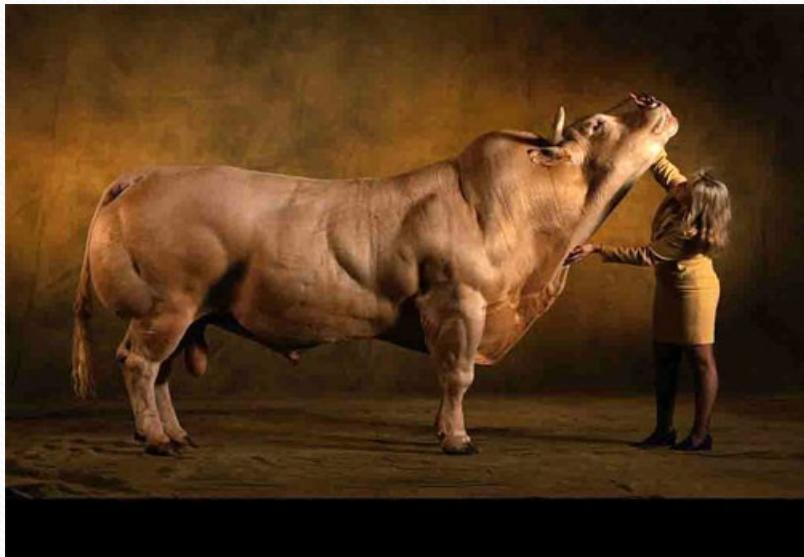

- Origin : Japan
- Wagyu cattle are descended from native Asian breeds which were crossbred with various European breeds in the late 1800s.
- There are black and red wagyu breed
- Highly marbled

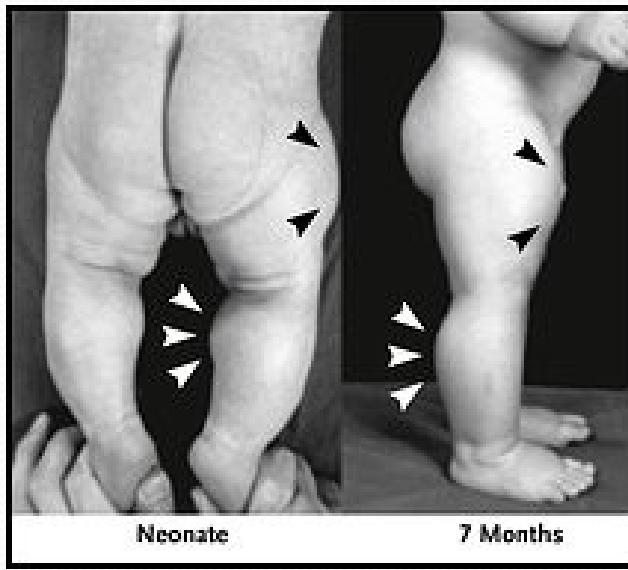

Belgian Blue cattle

- Origin : Belgium
- Extreme muscling specially in the shoulder, back, loin and rump area → double muscled cattle
- Less fat, tender meat (because the muscle fibre is thinner and shorter)
- In 1997, mutation of gene, called *myostatin*, caused the double muscling in cattle (and others species including human)

Belgian Blue cattle

Bit about *myostatin*

- Function : control muscle growth (inhibit muscle growth)
- Mutation in *myostatin* caused the disruption of muscle inhibition → muscle grow more and more (the extreme one can be seen in Belgian Blue Cattle)
- Others cattle, such as Limousin and Angus also carried *myostatin* mutation and caused increase muscle mass but not as extreme as Belgian Blue cattle

- Mutasi :
 - ACCCTTGGTG → ACC**G**TTG = Single Nucleotide Polymorphisms (SNPs)
 - ACCCTTGGTG → ATTGGTG = Deletion
 - ACCCTTGGTG → ACCC**GGGG**TTGGTG = Insertion
